## mSideLEDs

### PRELIMINARY

MSL-510SW

09/09/2003

---

### Features

- **Package** : white micro-sideview PLCC-2 package with yellow epoxy.
- **Feature of the device** : extremely wide viewing angle  
ideal for backlighting and coupling in  
light guides
- **color** : x/y coordinate : 0.31/0.32
- **Viewing angle** : Lambertian Emitter (X : 120° / Y : 120°)
- **Technology** : InGaN on sapphire with yellow phosphor (white)
- **Grouping parameter** : luminous intensity , Chromaticity
- **Assembly methods** : suitable for all SMT assembly methods
- **Soldering methods** : IR reflow soldering
- **Taping** : 8-mm tape with 3500/reel,  $\phi$ 180mm

### Applications

- **Backlighting** : LCD Display, Key pads

## Selection Guide

Part Number	Luminous Intensity				Chromaticity Coordinates (Typ.)		Viewing Angle 2q 1/2 (Degrees)

## Unity White uSideLEDs Bin Codes

Category Code	
S	B3

Luminous Intensity Group
R : 360 mcd ~ 500 mcd
S : 500 mcd ~ 720 mcd
T : 720 mcd ~ 1000 mcd

Luminous intensity is tested at a current pulse ( 20mA ) duration of 25 ms and an accuracy of  $\pm 10\%$

Color Coordinate @ $I_F=20mA$								
Bin Code	1		2		3		4	
	X	Y	X	Y	X	Y	X	Y
A0	0.28	0.248	0.264	0.267	0.283	0.305	0.296	0.276
B3	0.287	0.295	0.283	0.305	0.304	0.330	0.307	0.315
B4	0.307	0.315	0.304	0.330	0.330	0.360	0.330	0.339
B5	0.296	0.276	0.287	0.295	0.307	0.315	0.311	0.294
B6	0.311	0.294	0.307	0.315	0.330	0.339	0.330	0.318
C1	0.330	0.360	0.361	0.385	0.361	0.351	0.330	0.318

Chromaticity coordinate groups are tested at a current ( 20mA ) pulse duration of 25 ms and a tolerance of  $\pm 0.01$

## Tape Dimensions

## REEL Dimensions

Items		Specifications	Remarks
Leader	Cover Tape	Cover tape shall be longer than 400mm without carrier tape	The end of the carrier tape shall be adhered on the cover t
	Carrier Tape	There shall be more than 40 empties	The orientation of tape shall be as shown
Trailer		There shall be more than 40 empties	The end of the tape shall be inserted into a slit of the hub

## Surface Mount Moisture Sensitivity Specifications

### 1. Controlling Moisture

Unity Opto Technology, in its design of packing materials and packing methods, takes into consideration the susceptibility of some Unity packages to moisture induced damage. The risk of this damage is caused when the LED lens plastic encapsulation material is exposed to increases or decreases in the Relative Humidity of the surrounding environment.

Such damage may include delamination between the die and the LED lens plastic encapsulation material, which may result in open connections due to broken wire bonds. Moisture in the package having reached a critical level will fracture the package in order to escape when exposed to peak temperature conditions, typical in soldering practices.

Therefore, the control of moisture levels in the LED package is critical to reduce the risk of moisture-induced failures. Please follow JEDEC-STD-033A standards for handling moisture sensitive devices.

### 2. Packaging SMD devices:

Unity packages all SMD devices into dry pack bags (moisture barrier bags).

Unity includes a desiccant pouch in each bag. Testing confirms that the desiccant pouch greatly reduces the presence of moisture by maintaining the environment in the bag, thus protecting the devices during shipment and storage.

### 3. Handling Dry Packed Parts

Upon receipt, the bags should be inspected for damage to ensure that the bag's integrity has been maintained. Inspection should verify that there are no holes, gouges, tears, or punctures of any kind that may expose the contents of the bag.

To open the bag, simply cut across the top of the bag as close to the original seal as possible being careful not to damage the contents. Once open the desired quantity of units should be removed and the bag resealed. If the bag is left open longer than 2 hours, the desiccant pouch should be replaced with a dry desiccant and the bag should be sealed immediately to avoid moisture damage.
